

1. Cut out parts 1-4.
2. Fold 1 down the center line, matching the wings up.
3. Fold down each side along the fold lines. Unfold each side 90 degrees so the wings are level.
4. Put glue on the tab inside the body and on the tail fin. Insert the tail fin and push the body parts together.
5. Put glue on half nose weight 2 and fold in half. Put glue on half and fold in half again. Fold in half again, but don't glue yet.
6. Do the same for weight 3.
7. Put glue on both insides of 2, and glue under the nose of the body.
8. Glue weight 3 over 2.

To fly:

Make sure wings are level, both front and back.

Sight down the nose to check this.

Use a gentle throw. Slight bending up of wings during flight is normal.

Key:

—————  
Cut

.....  
Fold UP (hides line)

- - - - -  
Fold DOWN (line is visible)

- · - · -  
Line up to this line
